## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-21, are drawn to a method of transducing a cell lacking CAR, classified in class 514, subclass 44.
- Claims 22 and 23, are drawn to a method of treating a genetic disease or cancer in a human, classified in class 514, subclass 1.

The inventions are independent or distinct, each from the other because:

Inventions of groups I and II are directed to related methods. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the related methods do not overlap in scope because the method of transducing a cell lacking CAR by contact with an expression vector and the method of treating a genetic disease or cancer in a human are different methods having different materials, steps and reasons for use. Neither method is required for the ability to complete the other. Due to the distinctness of the inventions a search burden would exist if an election of a group and subgroup where not made.

For group I above, restriction to one of the following is also required under 35 U.S.C. 121. Therefore, election is required of subgroups (A)-(D) if group I is elected.

Subgroups (A)-(D) represent the claimed invention wherein further comprising a transduced cell lacking CAR as stated in claims 16-20:

- (A) a neuronal or epithelial cell,
- (B) a human umbilical vein epithelial cell (HUVEC),
- (C) a tumor cell, and
- (D) a neuroprogenitor or stem cell.

If Applicant elects subgroup (C), the applicant is further required to elect one of the tumor cells listed in claim 19.

For group II above, restriction to one of the following is also required under 35 U.S.C.

121. Therefore, election is required of subgroups (a)-(d) if group II is elected.

Subgroups (a)-(d) represent the claimed invention wherein further comprising a method of treating a genetic disorder or cancer in a mammal as stated in claim 22:

- (a) a polypeptide,
- (b) a polynucleotide,
- (c) an expression vector, and
- (d) an adenovirus particle.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Application/Control Number: 10/621,006

Art Unit: 1648

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Conclusion

Any inquiry concerning this communications or earlier communications from the examiner should be directed to Benjamin P. Blumel whose telephone number is 571-272-1600. The examiner can normally be reached on M-F, 8-5PM.

Application/Control Number: 10/621,006 Page 5

Art Unit: 1648

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-1600. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
